Task 4 — Reflect

I almost used a `<div>` for the news story card section because it is a generic container, but I used `<article>` instead to make the content self-contained and semantically clear. For the top navigation links, I initially thought of wrapping them in a standard `<div>`, but I used `<nav>` instead to clearly define the navigation section. A common mistake is using generic `<div>` tags for everything, which ruins the semantic structure and accessibility of the webpage. Another common mistake is placing non-navigation elements inside `<nav>` or labeling the entire page as `<main>` instead of breaking it down into distinct elements like `<header>`, `<article>`, and `<footer>`.
